

The 6 habits an efficient IS

*Manifesto for an IT
that serves the profession, the collective
and the long term.*

*Working in a clear and shared framework does not
mean losing autonomy. It's about gaining energy.*

01

Check that we have understood each other

before building. Make IT
business ↔ translation a
serious act, not a guess.

02

Keeping a clear framework

Because the frame liberates.
Without a framework,
autonomy becomes solitude
and a double constraint.

03

Serving the need

not his own technical
pleasure. Deliver what's
required, within budget, with
the tools around the house.

04

Document and transmit

Because we are passing
through. What you build
belongs to the company —
and to the successor.

05

Drive AI

before equipping him.
Learning Python is individual.
Transforming an organization
is collective.

06

Thinking about the IS as a common good

which only works collectively.
None of the previous five
habits holds up on their own.
